

PRIVATE KNOWLEDGE SYSTEMS

COMPANY KNOWLEDGE, WITHOUT LOSING THE EVIDENCE OR THE BOUNDARIES

Make approved company knowledge easier to find, verify and use.

Knowledge Systems designs and implements private, permission-aware knowledge systems for teams whose important information is spread across documents and repositories. The starting point is a bounded assessment, followed by a read-only pilot that tests retrieval, citations, permissions and freshness against written acceptance cases.

THE WORKING MODEL

Operations manual CURRENT
owner / version / source link

Project decision log APPROVED
owner / version / source link

Technical procedure RESTRICTED
owner / version / source link

ANSWER WITH EVIDENCE

Cited source | access checked ●

WHAT CHANGES FOR THE CLIENT

FIND

Approved answers are easier to locate.

VERIFY

Users can inspect the source, owner and version.

CONTROL

The agreed access model remains part of retrieval.

BEST FIT

A practical first engagement

- One sponsor and one defined workflow.
- A bounded set of approved sources.
- A real need for citations, version clarity or access control.
- A team willing to test against written questions and expected evidence.

STARTING PATH

Assessment first. Pilot second.

- 1 QUALIFY**
Confirm problem, sponsor and safe boundary.
- 2 ASSESS**
Map sources, permissions, risks and pilot scope.
- 3 PILOT**
Prove the read-only workflow before expansion.

A BOUNDED ENGAGEMENT WITH WRITTEN OUTPUTS

The work is divided into decision gates. Each phase has a defined purpose, inputs, deliverables and exit decision.

PHASE 1

Knowledge Assessment

TYPICAL DURATION / 1-2 WEEKS

A paid decision package that defines whether a pilot is justified and what it should contain.

WORK PERFORMED

- Interview the sponsor and representative users.
- Map the workflow, recurring questions and failure points.
- Inventory source owners, file types, update patterns and permissions.
- Select one high-value, testable pilot use case.
- Define architecture assumptions, dependencies and acceptance cases.

CLIENT RECEIVES

Current-state map, source and permission inventory, risk register, recommended architecture and a fixed pilot proposal.

PHASE 2

Read-Only Knowledge Pilot

TYPICAL DURATION / 4-6 WEEKS

A working internal pilot that proves the selected workflow under realistic permissions and source conditions.

TYPICAL PILOT BOUNDARY

- One team and one operational workflow.
- Usually 5-15 named pilot users.
- Usually 2-3 approved repositories or source sets.
- Read-only retrieval: no autonomous changes to source systems.
- Evaluation against agreed questions, roles, citations and refusal cases.

CLIENT RECEIVES

Working pilot, evaluation results, known limitations, deployment notes, administrator guide and handover session.

DECISION GATES

HOW THE SYSTEM WORKS

A knowledge layer that preserves identity, access and evidence.

The exact technology stack and deployment boundary are selected during the assessment. The diagram below shows the control model, not a promise that every client uses the same components.

WHAT THE DESIGN IS INTENDED TO PRESERVE

INDICATIVE INVESTMENT

A clear entry price, then a fixed proposal for the defined scope.

These are planning ranges in USD. The final proposal states the exact fee, payment milestones, dependencies, exclusions and acceptance criteria.

ENGAGEMENT	PLANNING RANGE	TIMING
Knowledge Assessment Written decision package and fixed pilot scope.	\$1,000-\$2,000	1-2 weeks
Read-Only Pilot One workflow, named users and approved sources.	\$6,000-\$12,000	4-6 weeks
Production Expansion Quoted only after pilot acceptance and defined requirements.	Separate proposal	After pilot

ASSESSMENT CREDIT

**Paid once.
Applied once.**

When the recommended pilot SOW is signed within 45 calendar days of assessment delivery, the professional fee paid for the assessment is credited in full against the pilot.

EXCLUDED FROM CREDIT

Travel, cloud services, third-party licenses, specialist costs and applicable taxes.

WHAT DETERMINES THE EXACT FEE

Sources	Permissions	Deployment	Evaluation
number, formats and document condition	roles, exceptions and identity method	client server, private cloud or agreed environment	test depth, reporting and handover requirements

COMMON QUESTIONS

Why is the assessment paid?

It produces a decision package and makes fixed pilot pricing responsible.

Do you need all company data?

No. Only approved sources for the selected workflow are included.

Is the pilot autonomous?

No. The initial pilot is read-only. Actions require a separate later scope.

Can the system run locally?

Potentially. Hosting depends on security, infrastructure and feasible performance.

NEXT STEP

Request a 30-minute fit call.

Bring one workflow, the teams involved and the source locations.
